Career Summary

Engineering and business-oriented professional with experience in project coordination, operational analytics, and cross-functional execution within technical environments. Skilled in stakeholder communication, KPI tracking, workflow optimization, and structured documentation. Proven ability to coordinate multidisciplinary teams, analyze operational bottlenecks, and support execution across engineering and business functions. Combines technical expertise in Electrical & Electronic Engineering with business and project management training.

CORE COMPETENCIES

- **Project & Operations:** Project Coordination, Cross-Functional Collaboration, Stakeholder Communication, Workflow Optimization, Requirement Documentation, Agile/Scrum Fundamentals
- **Reporting & Analytics:** KPI Tracking, Root Cause Analysis, Process Monitoring, Operational Analytics, Power BI, Excel (Advanced)
- **Problem Solving:** Ambiguity Handling, Systems Thinking, Root Cause Analysis, Workflow Optimization
- **Tools:** Jira, Notion, Figma, Trello, MS Office Suite.
- **Technical:** Python, Embedded Systems, Robotics, Instrumentation, ERP Systems, Linux.

Education

- **Master of Business Administration (MBA)** Ongoing
North South University, Bangladesh
- **B.Sc. in Electrical & Electronic Engineering (EEE)** CGPA: 3.07 / 4.00
Islamic University of Technology (IUT), Gazipur

Professional Experience

Management Trainee Officer – Operations & Analytics Bengal Group of Industries

Oct 2021 – Feb 2023

- Coordinated operational improvement initiatives across procurement, quality, and production teams to improve execution efficiency and process consistency.
- Supported design and optimization of internal operational systems across **3 enterprise platforms**, ensuring alignment between process design and execution outcomes.
- Identified workflow inefficiencies and operational bottlenecks using data analysis, contributing to a **61% reduction in return and replacement cycles**.
- Developed KPI and SLA tracking reports to improve operational visibility and support management decision-making.
- Supported UAT, requirement validation, and stakeholder coordination to ensure system implementation matched business needs.
- Coordinated execution across multiple teams to improve process efficiency, service quality, and turnaround time.
- Supported workflow optimization and ERP-related process improvements through structured documentation and requirement coordination.
- Prepared analytical reports and progress updates for leadership and cross-functional stakeholders.

Certifications

- **Google Project Management Professional Certificate** – Agile, Stakeholder Communication, Risk & Delivery Management
- **Product Management Career Program — HDNB** – PRDs, User Stories, Product Analytics, UX Fundamentals

Leadership Experience

Team Lead – IUT Avijatrik Mars Rover Project

Jan 2020 – Jan 2021

- Led a **50+ member cross-functional engineering team** across mechanical, electrical, and software domains.
- Improved rover operational efficiency by **30%** through automation and system optimization.
- Reduced system failure rate by **25%** through core system redesign and reliability improvements.
- Applied Agile methods (sprints, backlog prioritization, iterative delivery) for structured execution.
- Ensured cross-functional alignment for integrated subsystem delivery.
- Contributed to COVID-19 ventilator initiative under constrained environments.

Vice-Chair – IEEE RAS Student Branch

- Increased engagement by 25% through technical programs and initiatives.
- Managed stakeholder communication and external partnerships.

Strategic & Analytical Projects

BANGLAPAY — Digital Payments Ecosystem [[View Project Link](#)]

- Designed end-to-end digital payment ecosystem workflows simulating a multi-stakeholder marketplace (banks, MFS providers, QR networks).
- Identified systemic inefficiencies in transaction routing, interoperability, and settlement flows across financial service providers.
- Modeled failure handling and recovery flows to improve system reliability and transaction success rate.
- Defined operational metrics including transaction success rate, latency, and network efficiency.

PROYAN — Urban Mobility Marketplace System [[View Project Link](#)]

- Designed a multi-sided mobility marketplace addressing supply-demand imbalance across urban transport systems.
- Built structured network and coverage models identifying gaps in route availability and provider distribution.
- Designed 10+ end-to-end user journeys simulating real-world marketplace interactions.
- Defined system success metrics including supply coverage, ETA accuracy, and service adoption rates.

Achievements

- International Mars Hackathon (2020) — 16th globally (1st among Bangladeshi teams)
- Indian Rover Design Challenge (2020) — 17th place
- European Rover Challenge (2019) — 15th globally (1st among Bangladeshi & Asian teams)
- Indian Rover Challenge (2018) — 5th place
- European Rover Challenge (2018) — 14th globally (1st among Bangladeshi teams)
